Acne scars: global skin improvement after a single session of LaserMe

REPORT SUMMARY

PATIENT

A 21-year-old female (Fitzpatrick IV) with ice-pick acne scars, post-inflammatory hyperpigmentation, and a history of isotretinoin completed 1 year prior.

TREATMENTS

Underwent a single session of **LaserMe** (fractional non-ablative 1470 nm). Parameters: 38 mJ/pulse, 1.8 mm spacing, 60 pulses/side, 1 pass. At 1-month follow-up, the patient

showed improved texture, tone, and pigmentation with positive self-esteem impact.

RESULTS

Treatment was safe and well-tolerated in higher Fitzpatrick type, though multiple sessions may be required for optimal results.

Neauvia products are for trained experts only. Use must follow approved indications and the Instructions for Use (IFU) in accordance to applicable laws and regulations in each country. Physicians are solely responsible for any treatments outside these conditions. The results shown are specific to an individual treatment plan. Treatment decisions must be adapted to each patient, who may respond differently based on numerous factors. Outcomes are variable and not guaranteed.
