Bio-regeneration: beyond physiological bio-stimulation

REPORT SUMMARY

PATIENT

A 47-year-old woman presented with skin laxity and tissue sagging following significant weight reduction.

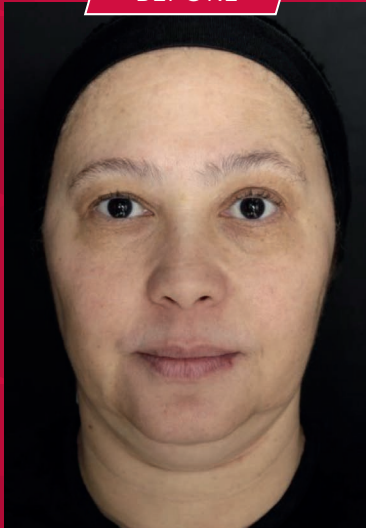

TREATMENTS

Treatment in a single session included **Neauvia Intense**, **Neauvia Stimulate** and full-face **Zaffiro**. The combined protocol redefined fat compartments and improved overall skin quality.

RESULTS

This case highlights how biostimulation initiates cellular activation, enhancing fibroblast activity and collagen production, while bioregeneration integrates structural support with signaling pathways to promote long-term remodeling. Multi-dimensional stimulation across distinct skin layers converts isolated responses into coordinated skin renewal, delivering advanced and natural outcomes.

Neauvia products are for trained experts only. Use must follow approved indications and the Instructions for Use (IFU) in accordance to applicable laws and regulations in each country. Physicians are solely responsible for any treatments outside these conditions. The results shown are specific to an individual treatment plan. Treatment decisions must be adapted to each patient, who may respond differently based on numerous factors. Outcomes are variable and not guaranteed.
