Masculinization

REPORT SUMMARY

PATIENT

A 41-year-old male, Fitzpatrick II, sought facial masculinization with improved jawline definition. Minimal prior aesthetic treatments were reported.

TREATMENTS

Neauvia Rheology 1 ml was used in the temples via 22G TSK cannula with an interfascial technique for volume restoration, while **Neauvia Intense** 2 ml

was applied to the mandible and cheeks for structural reconstruction. The softer filler addressed the temples, and the denser PEG-crosslinked filler acted like an implant in the lower face.

RESULTS

The treatment restored masculine contours, enhanced jawline definition, and improved facial harmony with high safety and tolerability.
