Structural bio-regeneration: minimizing the risks, maximizing the results

REPORT SUMMARY

PATIENT

The patient sought a more defined and lifted facial appearance. History included titanium implants in the mandible, maxilla, and chin (placed 7 years prior).

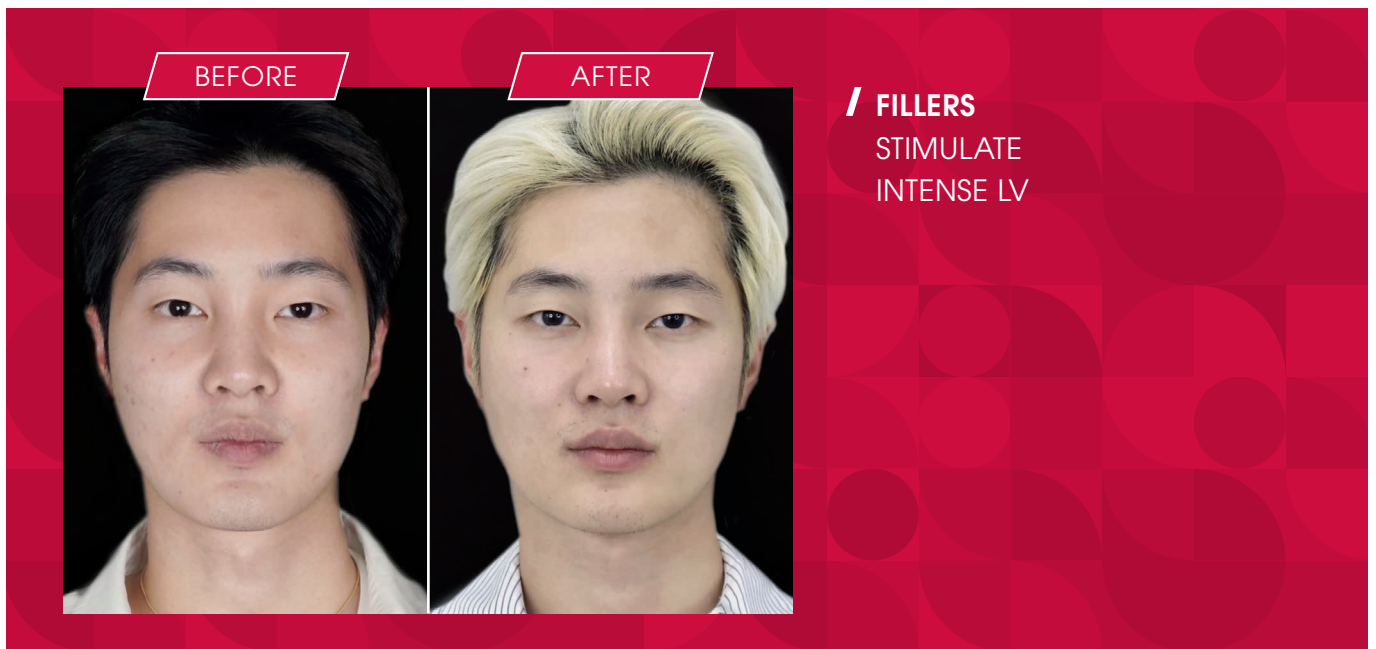

TREATMENTS

Neauvia Intense LV was injected along the zygomatic suture (0.2 cc/ side) for ligament support and in the subcutaneous jawline plane (0.5 cc/side) to enhance contour. **Neauvia Stimulate** (0.5 cc/side) complemented definition

through biostimulation. Total: 3 cc.

RESULTS

Excellent compatibility with titanium implants and no adverse effects. Minimal downtime, only a slight chin bruise resolving in 3 days. The patient reported high satisfaction and confidence. At 15 months, contour definition, symmetry, and natural harmony remained stable, demonstrating long-lasting biointegration and structural bioregeneration.

Dissapong Panithaporn. Pegylated Hyaluronic Acid Dermal Filler Injections in a Patient with Titanium Facial Implants: A Case Report. Clin Case Rep Int. 2024; 8: 1718. Neauvia products are for trained experts only. Use must follow approved indications and the Instructions for Use (IFU) in accordance to applicable laws and regulations in each country. Physicians are solely responsible for any treatments outside these conditions. The results shown are specific to an individual treatment plan. Treatment decisions must be adapted to each patient, who may respond differently based on numerous factors. Outcomes are variable and not guaranteed.
