REPORT SUMMARY

PATIENT

A 32-year-old patient underwent labia majora rejuvenation to restore volume and contour after weight loss.

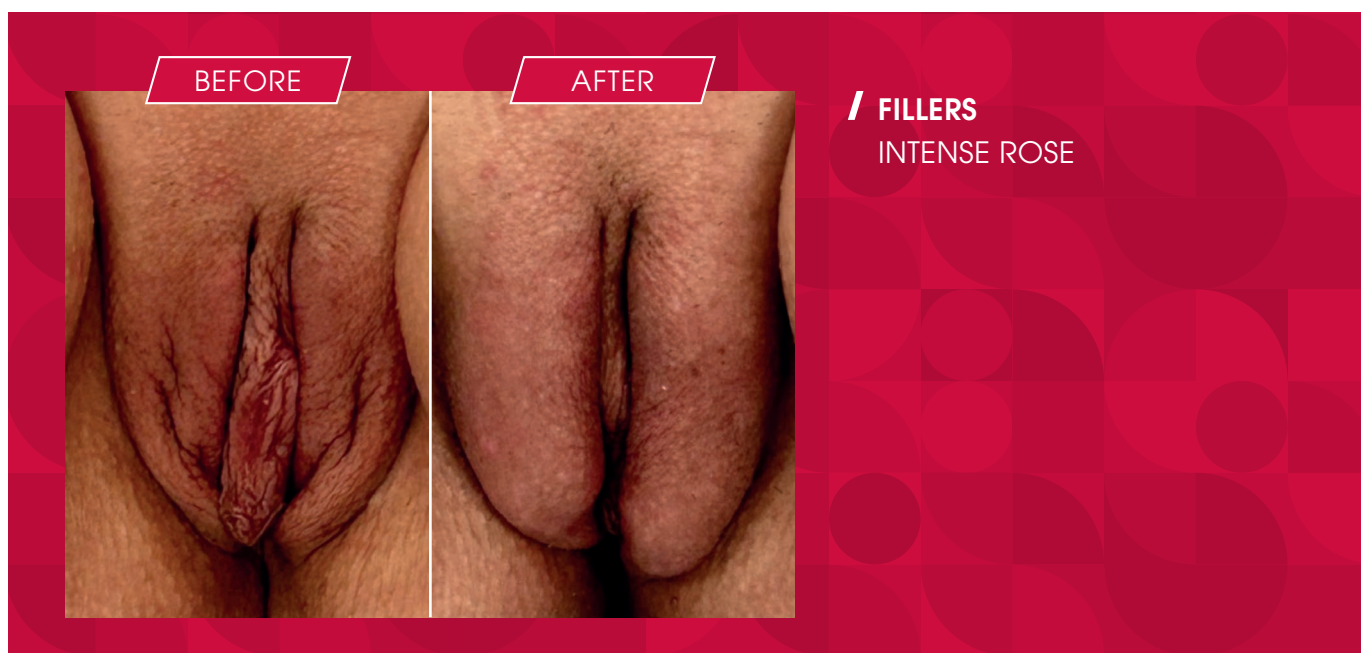

TREATMENTS

Neauvia Intense Rose (PEGDE-HA 28 mg/ml) was injected bilaterally under local anesthesia, using a 27G needle for entry and a 25G cannula for placement. A total of 3.8 ml was administered to the

right side and 3.2 ml to the left, followed by a 1 ml top-up per side after four weeks (total 9 ml).

RESULTS

The treatment achieved natural appearance, symmetry, and improved tissue support, with results maintained at one year.

Neauvia products are for trained experts only. Use must follow approved indications and the Instructions for Use (IFU) in accordance to applicable laws and regulations in each country. Physicians are solely responsible for any treatments outside these conditions. The results shown are specific to an individual treatment plan. Treatment decisions must be adapted to each patient, who may respond differently based on numerous factors. Outcomes are variable and not guaranteed.
