Upper face contouring using dermal filler

REPORT SUMMARY

PATIENT

A healthy 28-year-old female presented with forehead unevenness affecting her side profile.

TREATMENTS

Forehead contouring was performed using **Neauvia Intense Flux** (26 mg/ml PEG-HA) with the fanning technique, 0.5 cc per side, in a single session. The PEG-crosslinked HA allowed smooth spreading in the thin forehead area, improving side profile proportions.

RESULTS

The procedure delivered immediate, natural results, demonstrating Neauvia PEG-HA's effectiveness for forehead contouring in Asian female patients.
